If N capacitors are connected in m rows, each row having n capacitors, then $N=mn$. Each capacitor=1 F. Required capacitance of the combination, $C=2$ F. Voltage rating of each capacitor = 400V and required voltage rating of combination =1000V Since the capacitors are in series, potential difference gets added.

Chapter 22: Electrostatics. The charge that an object carries is as fundamental as the mass of that object. It may, in fact, be more fundamental. Although Albert Einstein predicted, and experiment later confirmed, that mass can be converted into energy and thus is not strictly conserved, physicists have never observed an event that did not conserve charge.

Conceptual Physics Electrostatics Answers

Students are getting ready for a unit test, so today's goal is to review the major concepts of electrostatics and electricity. These concepts include Coulomb's Law, electric fields, and Ohm's Law ($V = IR$). To accomplish our goal, students work through a practice test individually and collaboratively ($V = IR$). After that work time is over, I provide the practice test's answers using my sharing solutions
